Was the financial crisis of 2008 "The Great Recession" or the start of a long period that should be called "The Great Reset"? Corporate and consumer leverage got too high going into the recession, and they reset spending over years to reduce those debt loads, slowing growth. China reset their economy over years to promote consumption, causing a slowdown in their growth. Emerging markets suffered deep recessions on the years long reset in commodity prices, slowing growth. Developed markets saw a reset in political tone as populism gained traction. All of these were headwinds to confidence and growth rates. More importantly, all of these headwinds are mostly complete. Recognizing this, Central banks are starting to increase rates back to normal levels. A typical late cycle expansion continues in the US. International economies seem to be in an early cycle recovery, implying good growth potential from here. These should contribute to synchronized global growth which would be a positive for stock performance in the second half. After the “Great Reset” things are getting normal again and we think that is good for the outlook.

What makes us think the reset is complete and we’re getting back to normal economics?

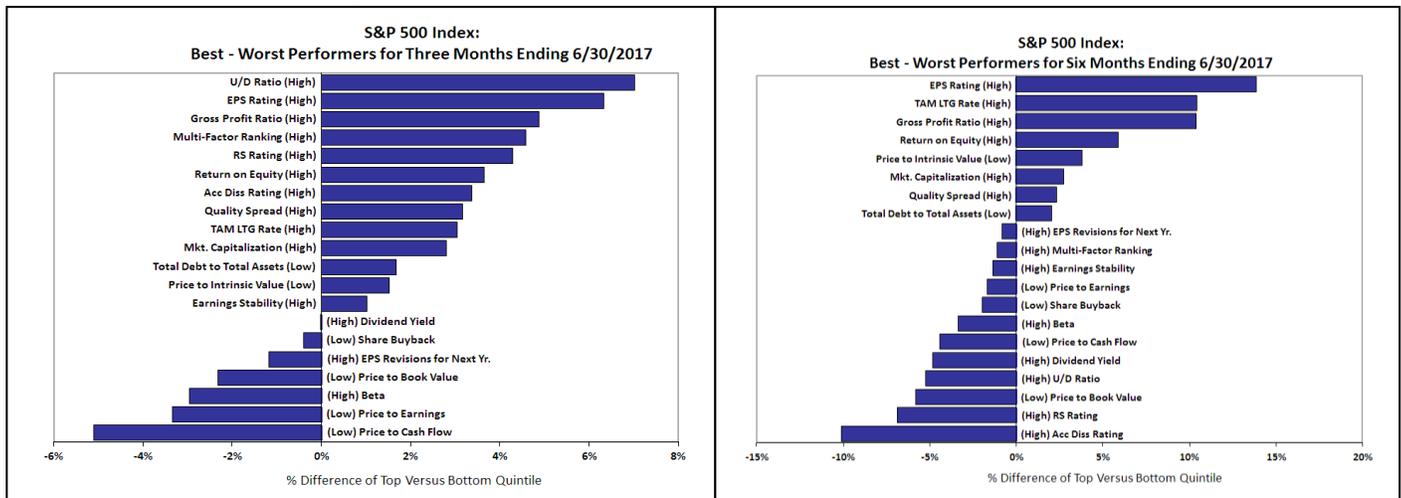

- Many central banks are raising rates (or contemplating it), something they would not be doing unless the reset was almost finished. The US Fed, Bank of Canada and the Bank of England fall into this category. The ECB has hinted at the end of their QE program. To quote Mr. Draghi, “We see growth above trend and well distributed across the Euro area.” Rate increases from very low levels are more of normalization than a tightening.
- Political shocks appear to be subsiding. The French election for a pro-Europe candidate highlighted that populations are less dissatisfied than had been worried.
- Commodities have softened recently, lowering inflation estimates. Markets still act well, and are not showing the high levels of market angst that accompanied the reset mentality during the last period of commodity weakness. Confidence is better.
- Consumers and Corporations have seen their debt burdens decline since 2008, and both recently bottomed out. Corporations have actually started increasing their debt to assets from very low levels. We view that as a sign the reset is done and further income gains can go to capex or consumption.
- Various other indicators show better confidence is at hand. MSCI added Chinese stocks to global indexes, European yield curves became steeper, global credit spreads narrowed

and many markets are responding positively. This indicates confidence in continued economic expansion is growing. For the first time since 2010, investors believe growth is sustainable, indicating that the reset is probably complete.

Rates have the potential to move higher from here. As this occurs, we think investors will favor fundamentals when investing, like they have been doing for the past year. This probably positions our strategies to continue the recovery we have seen lately.

Our customary charts that illustrate the factors being rewarded within the marketplace during the second quarter of 2017 and the trailing six months period are presented below. They indicate how the best 100 S&P 500 stocks compared to the worst 100 for each measure. There is a very positive development to note here, the markets have rewarded more factors this past quarter than they have over the past six months. Last year, investors were concerned and rewarded a narrow group of attributes. That sentiment has now turned to tentative confidence, indicated by a broader list of factors that helped performance. This is a good development for our style, and active managers in general. In the most recent quarter, investors favored a mix of technical, quality and fundamental measures. The factors that are out of favor include several valuation measures, beta, earnings revisions and shareholder return measures.

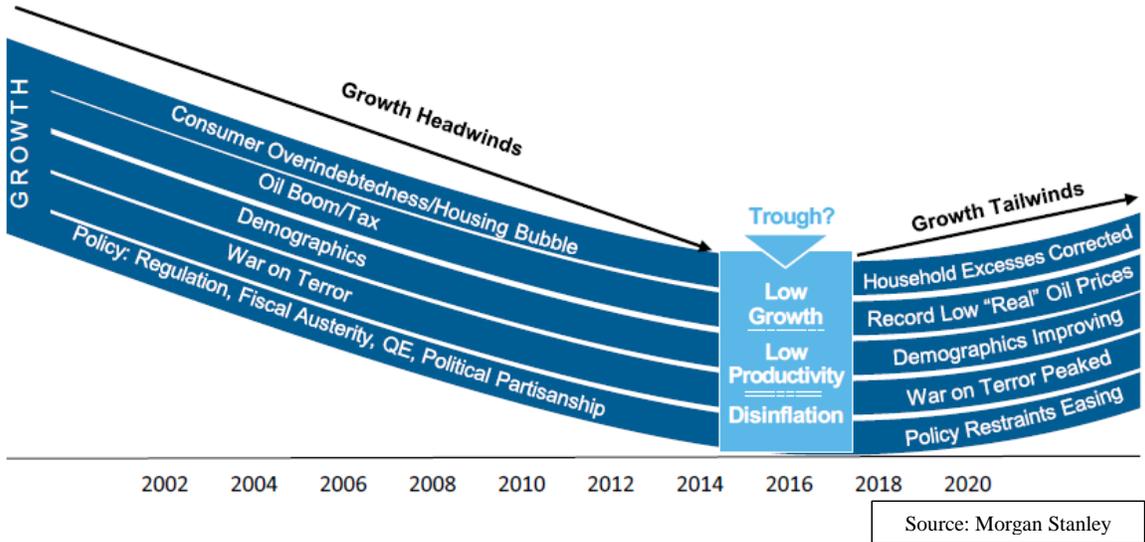

Source: Bloomberg, TAM

Performance for the first six months of the year was dominated by the continuation of the FANGMA (Facebook, Amazon, Netflix, Google, Microsoft and Apple) outperformance. Other technology names also acted well. Additionally, Health Care recovered as investors got comfortable that developments from DC would not sidetrack their fundamentals. Investors seem interested in pursuing growth oriented companies in a slower growth environment. Areas that did not do well included the Energy and Telecommunications sectors. Pricing concerns for both of these industries dominated the news flow during the quarter.

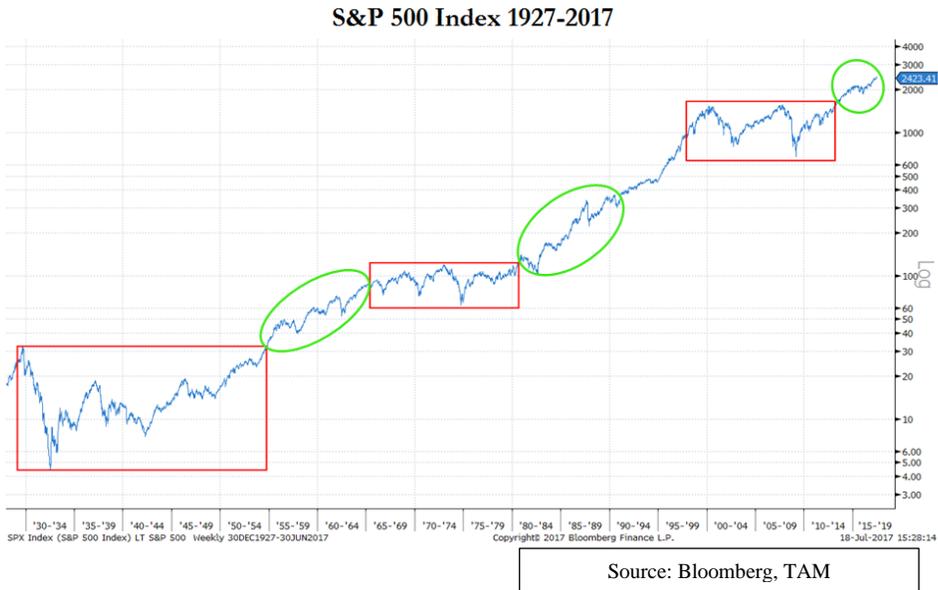

Interesting charts we saw this quarter

Secular Headwinds to Growth are Easing

This chart, compliments of Morgan Stanley, nicely summarizes the theme of this article. There have been a number of headwinds to growth over the past cycle. Those headwinds appear to be peaking over the past two years, and should subside as we go forward. This is a key premise for why we are in a secular bull market. The S&P 500, FTSE 100 and the German DAX indexes are all at or near all-time highs.

The chart above illustrates how relative economic growth rates lead to International Markets outperforming or underperforming the US. As international growth rates improve versus the US, those markets tend to outperform. As they deteriorate (like they did over the past seven years) they tend to underperform. The IMF recently issued forward estimates showing an expected improvement in the economic growth rate for the international markets, something we believe should lead to out-performance for international equities.

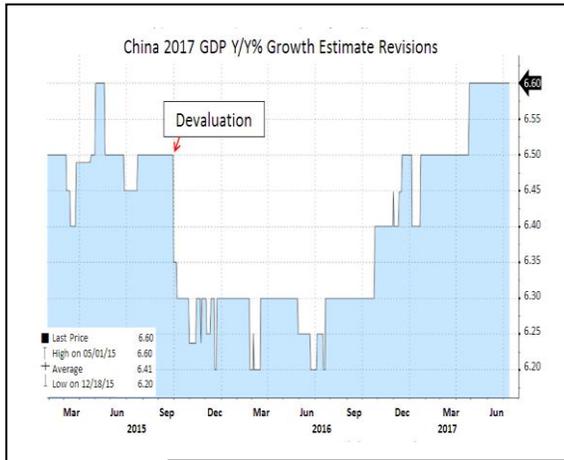

Source: Bloomberg, TAM

Post Brexit, European GDP growth estimates were dramatically reduced as investor feared for the stability of the EU. Since then, banks have recapitalized, political fears receded and estimates of growth have rebounded to surpass the prior expectations.

Post Brexit, UK 2017 GDP growth estimates were dramatically reduced as investor feared the outcome of exit negotiations and inflation. The economy has proven more resilient than feared, and estimates of growth have rebounded. More drama awaits us during the actual negotiations

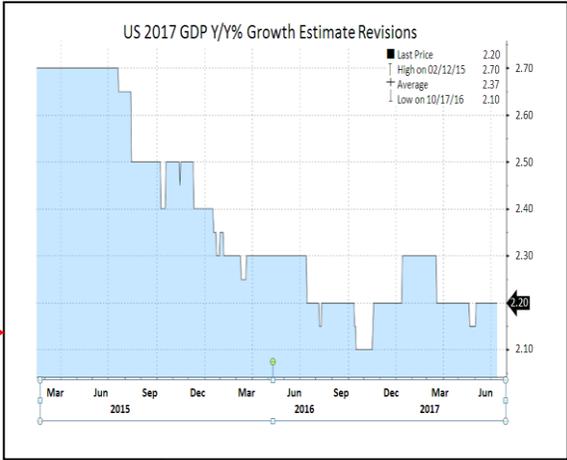

Source: Bloomberg, TAM

Source: Bloomberg, TAM

Chinese 2017 GDP estimates declined in late 2015 on economic and financial stability worries after their devaluation. The Chinese government instituted stimulative fiscal policies since then, which have led to a rebound in growth expectations.

US 2017 GDP estimates came down in late 2015 on economic and financial stability fears. Unlike the other major world economies, listed above, expectations have not rebounded yet. If stimulative policies can be pursued by Washington, we may see estimates tick up.

Performance Review

The IV Opportunity strategy increased **+0.5%** (gross) during the quarter, underperforming both the S&P 500 (**+3.1%**) and Russell 1000 Value (**+1.3%**). Most measures of value were penalized in the quarter, as investor sought the more expensive growth oriented stocks. Measures of balance sheet strength and market acceptance got some traction in the quarter, but when paired with our value overlay, those and the balance sheet indicators lead to lackluster performance in the quarter. While the discipline has good long term performance versus the indexes, recent performance has been disappointing. Normally, that provides a good opportunity to add to the strategy, as it is based on factors that have stood the test of time. They may be out of favor currently, but are unlikely to stay out of favor.

The Opportunity Strategy is an unconstrained discipline within the S&P 500 that invests in stocks possessing excellent value characteristics, and then pairing those with exceptional measures of profitability, balance sheet strength or market acceptance. We employ a stop loss methodology to limit risk from any one stock. Our sector exposure was weighed heavily in Consumer Discretionary, Technology and Financials. Consumer Staples, Energy, Utilities and Materials were our most underweight sectors.

Themes focused on during the quarter included Retailers, Media Content Providers, Insurers and Semiconductors.

Our top five contributors to performance during the quarter were McDonald's, Best Buy, Yum! Brands, Navient and LAM Research. McDonald's saw sales pickup and market share gains in the first quarter. The rollout of digital initiatives (mobile order & pay, etc.) is expected to further build momentum. Best Buy is benefiting from better sales of consumer electronics and the anticipation of the release of new generation smartphones later this year. Yum! Brands posted solid results driven by strength at their Taco Bell and KFC restaurants. Navient shares rose in response to efforts by the US Department of Education to consolidate the federal student loan market, which could potentially bring a windfall revenue stream if they win the final bid. LAM Research continues to see strong end market demand for their semiconductor manufacturing equipment.

Our worst five detractors from performance during the quarter were Signet Jewelers, Foot Locker, WW Grainger, Tractor Supply and Ross Stores. Signet Jewelers is facing dual headwinds of decreased mall traffic and pricing pressure, both of which are weighing on results. Foot Locker reported a very poor quarter where weak mall traffic weighed on results in a traditionally strong season which brought full year guidance into question. WW Grainger is attempting to regain market share and drive volumes via price cuts. While this may work longer term, it is likely to be a bumpy ride and shares sold off on the prospect of lower margins. Tractor Supply is seeing increased competition from online retailers, like Amazon, which are pressuring pricing and the outlook for margins. Ross Stores is also seeing increased competition from Amazon, who announced Prime Wardrobe in late June, sending shares down on the news.

In summary, we think many indicators suggest that the great economic reset from the 2008 financial crisis is probably close to finished. Exiting the reset period we have low rates, improving earnings, potential for more structural reforms in European/US regulations, and generally better confidence. That supports a positive secular call. Over the short term, there are some worries. Political negotiations over the Brexit are occurring. Expect more positioning from the politicians over that. The US political situation is unsettled and companies may be waiting to see how tax reform shapes up before committing to expansions. Commodities have been volatile lately, and may cause heartburn for investors before the summer is over. China is flexing their muscles in the South China Sea, North Korea is still crazy... and who knows what else could happen. There has been no shortage of drama as evidenced by Brexit negotiations, Russian election tinkering, EU Politics and Brazilian corruption. Despite that, many growth estimates have increased, profit forecasts are better and many global markets have moved to new highs. We don't see the excesses in place that spell the end of this bull market run yet.

As always, we are here to assist you. If you need any additional information, please feel free to contact any of us.

TODD ASSET MANAGEMENT LLC INTRINSIC VALUE OPPORTUNITY COMPOSITE DISCLOSURE

Past performance does not provide any guarantee of future performance, and one should not rely on the composite or any security's performance as an indication of future performance. Investment return and principal value of an investment will fluctuate so that the value of the account may be worth more or less than the original invested cost.

Specific stocks discussed in this presentation are included to help demonstrate the investment process or as a review of the Composite's quarterly results and are not and were not recommendations for purchase or sale by investors. All or some of the specific stocks mentioned may have been purchased or sold by accounts within the Composite during the period, or since the period, and may be purchased or sold in the future. A complete listing of the holdings as of the period end is available upon request.

Todd Asset Management LLC ("TAM") is a registered investment adviser. The performance presented represents a composite of fully discretionary accounts invested in equity securities within the S&P 500 Index with the objective to seek capital appreciation. This goal is pursued by investing in a portfolio of securities that are in the least expensive third of the S&P 500 Index using a rules based process based on financial strength, profitability strength and market acceptance.

Todd Asset Management LLC, formerly Todd-Veredus Asset Management LLC began operations on June 1, 1998 as Veredus Asset Management LLC (VAM). Effective May 1, 2009, VAM combined with Todd Investment Advisors, Inc. (TIA). TIA (and its predecessors) was founded in 1967 by Bosworth M. Todd. Upon the combination of VAM and TIA in 2009, Veredus Asset Management LLC changed its name to Todd-Veredus Asset Management LLC (TVAM). On February 28, 2013, after a change in ownership involving some VAM unitholders, TVAM changed its name to Todd Asset Management LLC. The firm continues to offer the same strategies managed by individuals using the process founded under TIA.

The Intrinsic Value Opportunity Composite contains fully discretionary, taxable and tax-exempt accounts that use either the S&P 500 Index or the Russell 1000 Value Index as the benchmark. All fee-paying, fully discretionary portfolios under our management are included in a composite. Accounts are eligible for inclusion in the composite at the beginning of the first calendar quarter after the month of initial funding and upon being fully invested.

TAM claims compliance with the Global Investment Performance Standards (GIPS®). TAM's compliance with the GIPS® standards has been verified for the period January 1, 2008 through March 31, 2017 by Ashland Partners & Company LLP and for the period July 1, 1989 through December 31, 2007 by a previous verifier. TIA's compliance with the GIPS® standards has been verified for the period January 1, 1993 through April 30, 2009 by Ashland Partners & Company LLP. In addition, a performance examination was conducted on the Intrinsic Value Opportunity Composite for the period January 1, 2011 through March 31, 2017. To receive a complete list and description of TAM composites and/or a full disclosure presentation which complies with the GIPS® standards, please contact TAM at 1-888-544-8633, or write Todd Asset Management LLC, 101 South Fifth Street, Suite 3100, Louisville, Kentucky 40202, or contact us through our Web site at www.toddasset.com.com.

The performance information is presented on a trade date basis, both gross and net of management fees, net of transactions costs, and includes the reinvestment of all income. Net of fee performance was calculated using the applicable annual management fee schedule of .80% applied monthly. From October 2009 to March 2014 the management fee schedule applied to the composite was 0.70%. Prior to October 2009, the management fee schedule applied to the composite was .60%. Actual investment advisory fees incurred by clients may vary. The currency used to calculate and express performance is U.S. dollars. All cash reserves and equivalents have been included in the performance.

The composite performance has been compared to the following benchmarks. The indexes are unmanaged, and not available for direct investment; they include reinvestment of dividends; they do not reflect management fees or transaction costs:

S&P 500 Index is a widely recognized index of market activity based on the aggregate performance of a selected portfolio of publicly traded common stocks. The performance data was supplied by Standard & Poor's. It is included to indicate the effect of general market conditions.

Russell 1000 Value Index is a widely recognized index of market activity based on the aggregate performance of common stocks from the Russell 1000 Index, with lower price-to-book ratios and lower forecasted growth values. The performance data was supplied by Frank Russell Trust Company.
